

LOAD BALANCER

The screenshot shows the Microsoft Azure portal interface. The top navigation bar includes the Microsoft Azure logo, an 'Upgrade' button, a search bar, and a Copilot button. The main header displays 'Compute infrastructure | Virtual machines' with a search bar and several action buttons: 'List all alerts for virtual machines', 'View virtual machines with critical alerts', and 'Create a replica from the VM list'. The left sidebar shows the navigation menu with 'Virtual machines' selected. The main content area shows a table of virtual machines with columns: Name, Subscription, Resource Group, Location, Status, Operating system, Size, and Public IP address. Two VMs are listed: 'Uweb01' and 'Uweb02', both running Linux on Standard_D2s_v3 size. The bottom of the screenshot shows the Windows taskbar with various application icons and the system clock indicating 18:29 on 31/01/2026.

Name	Subscription	Resource Group	Location	Status	Operating system	Size	Public IP address
Uweb01	Azure subscript...	Urg01	Central India	Running	Linux	Standard_D2s_v3	20.219.51.127
Uweb02	Azure subscript...	Urg01	Central India	Running	Linux	Standard_D2s_v3	20.193.226.75

The screenshot shows a web browser window with the address bar displaying '20.219.51.127'. The page content is a 'Welcome to nginx!' message. The text on the page reads: 'Welcome to nginx!', 'If you see this page, the nginx web server is successfully installed and working. Further configuration is required.', 'For online documentation and support please refer to nginx.org. Commercial support is available at nginx.com.', and 'Thank you for using nginx.' The bottom of the screenshot shows the Windows taskbar with various application icons and the system clock indicating 18:29 on 31/01/2026.

Welcome to nginx!

If you see this page, the nginx web server is successfully installed and working. Further configuration is required.

For online documentation and support please refer to nginx.org. Commercial support is available at nginx.com.

Thank you for using nginx.

The screenshot shows the Windows taskbar at the bottom of the screen. It includes the Start button, a search bar, and several application icons. The system clock in the bottom right corner indicates 18:29 on 31/01/2026.

Welcome to nginx!

If you see this page, the nginx web server is successfully installed and working. Further configuration is required.

For online documentation and support please refer to nginx.org.
Commercial support is available at nginx.com.

Thank you for using nginx.

The frontend IP address configuration of a load balancer serves as the entry point for incoming traffic to the load balancer, and the load balancer then distributes the traffic to the backend pool of virtual machines or services. [Learn more](#)

Microsoft Azure portal showing the configuration of the **Azlb01** Load balancer, specifically the **Backend pools** section.

The page displays the following information:

- Backend pool description:** The backend pool is a critical component of the load balancer. The backend pool defines the group of resources that will serve traffic for a given load-balancing rule. [Learn more.](#)
- Backend pool table:**

Backend pool	Resource Name	IP address	Network interface	Availability zone	Rules count	Resource Status	Admin state
Ubackend-pool (2)							
Ubackend-pool	Uweb01	172.16.0.4	uweb01144	-	1	Running	None
Ubackend-pool	Uweb02	172.16.0.5	uweb02976	-	1	Running	None

Navigation pane on the left includes: Activity log, Access control (IAM), Tags, Diagnose and solve problems, Resource visualizer, Settings, Frontend IP configuration, **Backend pools**, Health probes, Load balancing rules, Inbound NAT rules, Outbound rules, Properties, and Locks.

Microsoft Azure portal showing the configuration of the **Azlb01** Load balancer, specifically the **Health probes** section.

The page displays the following information:

- Health probes description:** To check the health status of your instances, navigate to the Load Balancing Rules page.
- Health probes table:**

Name	Protocol	Port	Path	Used By
UHealthprobe01	Tcp	80	-	LBrule

Navigation pane on the left includes: Activity log, Access control (IAM), Tags, Diagnose and solve problems, Resource visualizer, Settings, Frontend IP configuration, Backend pools, **Health probes**, Load balancing rules, Inbound NAT rules, Outbound rules, Properties, and Locks.

Microsoft Azure portal interface showing the "Add load balancing rule" form for resource Azlb01. The form fields are as follows:

Field	Value
Name *	LBrule
IP version *	IPv4
Frontend IP address *	fddip01 (4.224.137.76)
Backend pool *	Ubackend-pool
Protocol	TCP
Port *	80
Backend port *	80
Health probe *	UHealthprobe01 (TCP:80)
Session persistence	None
Idle timeout (minutes) *	4
Enable TCP Reset	☐

Buttons: Save, Cancel. A "Give feedback" link is at the bottom right.

Microsoft Azure portal interface showing the "Azlb01 | Load balancing rules" overview page. The page includes a left-hand navigation pane and a main content area with a table of rules.

Navigation Pane:

- Search
- Activity log
- Access control (IAM)
- Tags
- Diagnose and solve problems
- Resource visualizer
- Settings
 - Frontend IP configuration
 - Backend pools
 - Health probes
 - Load balancing rules**
 - Inbound NAT rules
 - Outbound rules
 - Properties
 - Locks

Main Content Area:

A load balancer rule is used to define how incoming traffic is distributed to all the instances within the backend pool. A load-balancing rule maps a given frontend IP configuration and port to multiple backend IP addresses and ports. An example would be a rule created on port 80 to load balance web traffic. [Learn more.](#)

Filter by name...

Name	Protocol	Backend pool	Health probe	Health status
LBrule	TCP/80	Ubackend-pool	UHealthprobe01	View details

Buttons: Add, Refresh, Export to CSV, Delete. A "Give feedback" link is at the bottom right.

LET'S SEE REQUEST COMING FROM WITH MACHINE (Edit content in web01)

The screenshot shows a MobaXterm terminal window titled "20.219.51.127 (azureuser)". The terminal displays the following content:

```
* Management: https://landscape.canonical.com
* Support: https://ubuntu.com/pro

System information as of Sat Jan 31 14:30:39 UTC 2026

System load: 0.0          Processes:           144
Usage of /: 6.6% of 28.02GB Users logged in:       0
Memory usage: 4%          IPv4 address for eth0: 172.16.0.4
Swap usage: 0%

Expanded Security Maintenance for Applications is not enabled.

0 updates can be applied immediately.

Enable ESM Apps to receive additional future security updates.
See https://ubuntu.com/esm or run: sudo pro status

Last login: Sat Jan 31 11:25:46 2026 from 139.5.250.57
To run a command as administrator (user "root"), use "sudo <command>".
See "man sudo_root" for details.

azureuser@Uweb01:~$ sudo su
root@Uweb01:/home/azureuser# cd /var/www/html/
root@Uweb01:/var/www/html# pwd
/var/www/html
root@Uweb01:/var/www/html# ls
index.nginx-debian.html
root@Uweb01:/var/www/html# vi index.nginx-debian.html
root@Uweb01:/var/www/html#
```

The terminal window also shows a file explorer on the left with the path "/home/azureuser/" and a status bar at the bottom indicating system resources like memory (0.55 GB / 7.76 GB) and disk usage.

The screenshot shows a web browser window with the address bar displaying "20.219.51.127". The page content is as follows:

Welcome to Uweb01

If you see this page, the nginx web server is successfully installed and working. Further configuration is required.

For online documentation and support please refer to nginx.org.
Commercial support is available at nginx.com.

Thank you for using nginx.

The screenshot shows a Windows taskbar with the system clock displaying "21:40 31/01/2026" and a search bar.

**NOW COPY LB(FRONTEND PUBLIC IP) AND CHECK
IN BROWSER, BEFORE THAT STOP ANY MACHINE
SO THAT WE CAN KNOW REQUEST COMING FROM
WHICH MACHINE**
