

Connecting 2linux machines within VNet

The image is a screenshot of the Microsoft Azure Portal, showing two different pages. The top page is the 'Create a resource group' page, and the bottom page is the 'UVnet01' virtual network overview page.

Top Page: Create a resource group

The page title is 'Create a resource group'. It has tabs for 'Basics', 'Tags', and 'Review + create'. The 'Basics' tab is selected. The page contains the following information:

- Subscription ***: Azure subscription 1
- Resource group name ***: URg02
- Region ***: (US) North Central US

At the bottom of the page, there are buttons for 'Previous', 'Next', and 'Review + create'.

Bottom Page: UVnet01 - Microsoft Azure

The page title is 'UVnet01 - Microsoft Azure'. It shows the 'Overview' tab for the virtual network 'UVnet01'. The page contains the following information:

- Activity log**: Shows the activity log for the virtual network.
- Access control (IAM)**: Shows the access control for the virtual network.
- Tags**: Shows the tags for the virtual network.
- Diagnose and solve problems**: Shows the diagnostic tools for the virtual network.
- Resource visualizer**: Shows the resource visualizer for the virtual network.
- Settings**: Shows the settings for the virtual network.
- Monitoring**: Shows the monitoring for the virtual network.
- Automation**: Shows the automation for the virtual network.
- Help**: Shows the help for the virtual network.

The 'Essentials' section shows the following information:

- Resource group**: Azure-RG
- Location**: North Central US
- Subscription**: Azure subscription 1
- Subscription ID**: 8debeb8f-ac6e-4b93-b3a1-b8a95585b1ee
- Address space**: 10.0.0.0/16
- Subnets**: 1 subnet
- DNS servers**: Azure provided DNS service
- BGP community str...**: Configure
- Virtual network ID**: 0a2495d1-56da-4782-8c53-e54555e2c670

The 'Capabilities' section shows the following information:

- DDoS protection**: Not configured
- Azure Firewall**: Not configured
- Peering**: Not configured
- Microsoft Defender for Cloud**: Not configured
- Private endpoints**: Not configured

Standard HDD OS disks will be retired on September 8, 2028. [Click to learn more](#)

Azure VMs have one operating system disk and a temporary disk for short-term storage. You can attach additional data disks. The size of the VM determines the type of storage you can use and the number of data disks allowed. [Learn more](#)

There is a charge for the underlying storage resources consumed by your virtual machine. [Learn more](#)

VM disk encryption

Azure disk storage encryption automatically encrypts your data stored on Azure managed disks (OS and data disks) at rest by default when persisting it to the cloud.

Encryption at host

Encryption at host is not registered for the selected subscription. [Learn more](#)

OS disk

OS disk size

Image default (30 GiB)

OS disk type *

Standard HDD (locally-redundant storage)

The selected VM size supports premium disks. We recommend Premium SSD for high IOPS workloads. Virtual machines with Premium SSD disks qualify for the 99.9% connectivity SLA.

Delete with VM

Create a virtual machine

Help me choose the right VM size for my workload Help me create a VM optimized for high availability Help me create a low cost VM

Define network connectivity for your virtual machine by configuring network interface card (NIC) settings. You can control ports, inbound and outbound connectivity with security group rules, or place behind an existing load balancing solution.

[Learn more](#)

Network interface

When creating a virtual machine, a network interface will be created for you.

Virtual network  (New) vnet-northcentralus (URg01) 
[Edit virtual network](#)

Subnet *  (New) snet-northcentralus-1 
[Edit subnet](#) 172.16.0.0 - 172.16.0.255 (256 addresses)

Public IP  (new) Uvm01-ip 
[Create new](#)
 Public IP addresses have a nominal charge. [Estimate price](#)

NIC network security group  ☐ None
☒ Basic
☐ Advanced

Public inbound ports *  ☐ None
☒ Allow selected ports

Select inbound ports * (SSH (22) 
 **This will allow all IP addresses to access your virtual machine.** This is only recommended for testing. Use the Advanced controls in the Networking tab to create rules to limit inbound traffic to known IP addresses.

Delete public IP and NIC when VM is deleted  ☐

Enable accelerated networking  ☒

Load balancing

You can place this virtual machine in the backend pool of an existing Azure load balancing solution. [Learn more](#)

Load balancing options  ☒ None
☐ Azure load balancer
Supports all TCP/UDP network traffic, port-forwarding, and outbound flows.
☐ Application gateway
Web traffic load balancer for HTTP/HTTPS with URL-based routing, SSL termination, session persistence, and web application firewall.
